FROM MORRIS GROUP INTERNATIONAL

Our divisions offer training opportunities for you, via our CEU Courses, opportunities for one-on-one training sessions, and educational videos in the Morris Group University Video Library.

Vacuum Plumbing for Sustainable and “Future-Ready” Design

Vacuum plumbing accommodates restrictive site and structural concerns, no trenching or cutting of slab. This course will help you understand the benefits of Vacuum Plumbing as compared to traditional gravity plumbing and when it would apply.

Hygienic Hydration: Past, Present, Future

This course recounts the history of the drinking fountain and addresses regulations surrounding drinking water distribution and treatment. It introduces touchless activation, compares the use of bottled water to bottle refillers, and provides guidelines for specifying commercial water delivery systems.

Ligature-resistant bathroom

Wash Your Hands One More Time

This course outlines the proper handwashing techniques, especially for healthcare and food preparation contexts; explains how germs, viruses, and bacteria are spread and where sanitation problems with sinks may reside; and describes how to select and specify the most appropriate washup, infection prevention, and scrub sinks, countertops, and fitments.

Ligature-Resistant Solutions for Behavioral Healthcare Facilities

The design of behavioral healthcare facilities should address the therapeutic and safety needs of patients and staff while meeting the applicable codes and regulations. Reviewed in this course are ligature-resistant products developed for patient rooms and bathrooms that strike the balance between providing the safest universal design solutions while creating a non-institutional environment.

Typical bariatric ADA bathroom featuring an “easy to clean under” bariatric toilet and sink

Advances in Plumbing Design for Healthcare

Healthcare facilities are now striving to meet the needs of all patients to offer not only healthy and safe spaces, but inclusive spaces as well. This course reviews innovations in plumbing design and how these designs support trending healthcare needs, such as infection prevention, behavioral healthcare, and bariatric and ADA patients.

Safe Healthcare Water Delivery

Just as healthcare providers strive to stop the spread of disease in the body, so too are facilities trying to stop waterborne viruses and bacteria before they get out of control. This course highlights the concerns and consequences of improper water delivery in healthcare facilities and discusses why they are embarking on a systems approach and using a monitoring system to manage infection control.

Chronomite Electric Tankless Water Heaters

Conserving Water and Energy: Electric Tankless Hot Water Heaters

Energy prices and sources, environmental concerns, and water shortages are significant problems and it is important to produce hot water in a manner that addresses these issues. This course explains how electric tankless water heaters (ETWHs) do this while also improving health and safety conditions and reducing costs. The course includes descriptions of many types of ETWHs and the basic calculations and selection criteria.

Inclusive Restroom Design in Public Bathrooms

Inclusive design shows that a business supports the assumption that public spaces should be functional for all users no matter their age, health, or ability. This includes promoting and respecting everyone's right to choose a washroom appropriate for them regardless of their gender expression, gender identity, or biological sex. This course explores the benefits of gender-neutral spaces and discusses the sustainable, hygienic, functional, and distinctive design and material options for gender-neutral public bathrooms.
