LIGATURE-RESISTANT FIXTURES/ACCESSORIES

BestCare®
By Whitehall Manufacturing®

PATIENTS, NOT PRISONERS®

SAFE & SECURE
Optimize patient safety, security and comfort.
HISTORY IN THE INDUSTRY
Founded in 1946, Whitehall Manufacturing celebrates over 70 years in the healthcare plumbing industry.

ON-SITE FACILITY TRAINING
We have the ability to work with each individual application to ensure professional on-site design, training and start-up.

DESIGN, CONSULTATION & SUPPORT
We personally guarantee the perfect fixture every time, from initial design to follow-up support.

QUALITY CRAFTSMANSHIP
Whitehall fixtures are constructed with only the highest-grade materials, from stainless steel to solid surface polymer.

DEDICATED CUSTOMER SERVICE
Our trained, tried and true representatives are devoted to providing only the highest quality customer service.

425 gallon Hubbard Tank. First used to treat injured soldiers during WWII, Whitehall Hubbard Tanks are capable of providing an increase in the range of motion as well as whole-body access in the treatment of burns and other skin conditions. This is one example of our many manufacturing capabilities.
Founded in New Jersey in 1946, Whitehall Manufacturing was a key manufacturer of whirlpools designed to treat injured soldiers after World War II. Since then, Whitehall has attained and established a myriad of healthcare and rehabilitation lines. Introduced in 2013, our BestCare® ligature-resistant fixtures minimize ligature points to reduce risk and enhance patient well-being in behavioral healthcare facilities.

Whitehall’s® BestCare products are designed to meet the unique application challenges faced by behavioral healthcare facilities seeking to maintain the balance between patient safety, security, and creating a non-institutional environment. All BestCare products are designed to ensure patient safety with aesthetics in mind.

75% of suicides occur in the patient’s bathroom, bedroom, or closet.6
Staying healthy is more than just taking care of one’s physical health. Behavioral healthcare is a term that is often used interchangeably with mental health, encompassing all treatment of psychiatric illness.

Behavioral healthcare includes multiple methods of promoting well-being by preventing or intervening in mental illness such as depression and anxiety, but also has an aim in preventing or intervening in substance abuse and other addictions. Whitehall’s BestCare® ligature-resistant line assists behavioral healthcare facilities by providing plumbing fixtures and an array of accessories that minimize ligature points and reduce opportunities for self-harm. BestCare fixtures and accessories helps reduce the rate of suicide with security, safety, aesthetics and sustainability.

Ligature-related suicides are the most common forms of suicide in inpatient settings.6
WHY UNIVERSAL DESIGN?

MARKET REQUIREMENTS

BestCare® ligature-resistant fixtures and accessories are the solution to many inpatient and staff requirements of the behavioral healthcare market, including:

- Safety and security
- Aesthetics
- A therapeutic environment
- Cost effectiveness and efficiency
- Infection prevention
- Durability and sustainability
- All codes in place for general or acute care hospitals, which also apply to behavioral healthcare facilities
- Designed to ADA and bariatric standards when they apply

HOW CAN IT MAKE A DIFFERENCE?

“Standards and guidelines such as the FGI Design Guide for the Built Environment of Behavioral Health Facilities are excellent resources to illuminate best practices. As part of a robust and comprehensive patient-safety risk assessment in pre-project planning, it is important to weigh the level of precaution necessary to reduce the risk of patient self-harm. The design challenge faced is in balancing patient safety without negatively impacting the creation of a therapeutic environment that is conducive to patient healing and recovery. Nonetheless, as the data shows, the preponderance of inpatient suicide by hanging is an area requiring increased focus and action.

No product can or should claim to be “suicide proof.” That said, ligature-resistant products and systems can hopefully reduce the incidence of self harm.”

*Standards and guidelines such as the FGI Design Guide for the Built Environment of Behavioral Health Facilities are excellent resources to illuminate best practices. As part of a robust and comprehensive patient-safety risk assessment in pre-project planning, it is important to weigh the level of precaution necessary to reduce the risk of patient self-harm. The design challenge faced is in balancing patient safety without negatively impacting the creation of a therapeutic environment that is conducive to patient healing and recovery. Nonetheless, as the data shows, the preponderance of inpatient suicide by hanging is an area requiring increased focus and action.

No product can or should claim to be “suicide proof.” That said, ligature-resistant products and systems can hopefully reduce the incidence of self harm.”
WHY UNIVERSAL DESIGN?

There is a need for products that are designed to meet the unique application challenges faced by behavioral healthcare facilities. A universally designed environment instills calm aesthetics that help decrease the rate of suicide. With products that are easy to use with clean, sleek lines, BestCare® is able to maintain the balance between safety and security.

Universal rooms are also becoming more common, replacing specialized rooms to accommodate all patients, including those with behavioral healthcare, ADA or bariatric concerns.

Universal rooms allow hospitals to easily accommodate a patient with special needs, without having to reorganize or move other patients. All patients feel welcomed and less stigmatized.
LIGATURE POINTS IN A TYPICAL BATHROOM

In traditional restroom applications, ligature points are more common than you might realize. The arrows below indicate dangerous ligature points in existing bathrooms, including sinks, toilets, showers, drains, grab bars, faucets, towel hooks and toilet paper dispensers.

As seen on the next page, BestCare® fixtures ultimately reduce ligature points to ensure a safer and more secure behavioral healthcare environment.

Save a life, be proactive and secure your facility's ligature points.

LIGATURE-RESISTANT PLUMBING FIXTURES & ACCESSORIES
Ligature-resistant fixtures protect patients and staff, reduce liability, and help comply with accreditation standards.

BestCare products are designed for both new construction and retrofit projects, allowing for existing healthcare facility alterations without the mess. While traditional new construction and retrofit projects may take weeks, even months to complete, our budget conscious and easy-to-install BestCare products cut installation time and help stay within your budget.
Ligature-resistant fixtures protect patients and staff, reduce liability, and help comply with accreditation standards. Cost and functionality are always a top consideration during new construction and retrofit projects. BestCare® fixtures and accessories are manufactured from durable materials that promote ease of maintenance to ensure that your new or renovated facility remains safe and secure for facility employees, maintenance workers, and patients.
BestCare sinks are seamlessly mounted to the wall and feature rounded edges to minimize ligature points. Sinks are available in stainless steel and solid surface options and are available to match BestCare® ligature-resistant mirrors with an array of Corterra® colors.
Our Ligature-Resistant Sinks are engineered to combine the look and feel of commercial grade designer sinks, while keeping the patient's safety in mind. The ligature-resistant sinks have a sloping backsplash, and a bottom shroud that covers the P-trap and valve.

A package price is available when sink is ordered with a faucet.

- Basin is 3-1/2" deep, fixture 21-1/2" from wall, stainless steel with integral "D" shaped bowl
- Enviro-Glaze® powder coated unit
- Can be bariatric when paired with a Jay R. Smith Mfg. Co.® fixture support; weight capacity is 1,000 lbs

### DESCRIPTION                  MODEL                  SIZE (W x H x D)

| Stainless Steel Sink, Enviro-Glaze Powder Coat | WH3740-09            | 19" x 25-3/8" x 21-1/2" |
| Stainless Steel Bariatric Sink, Enviro-Glaze Powder Coat | WH3740BAR-09         | 22-1/4" x 25-3/8" x 22-1/2" |
• Basin is 3-1/2" deep, fixture 21-1/2" from wall, stainless steel with integral "D" shaped bowl
• Countertop and sink are constructed of Corterra solid surface polymer resin
• Optional sensor activated faucet, WH3375L-SO
• Optional mixing valve delivers tempered water flow by compensating for pressure and temperature fluctuations
• Valve is to be field set to 105° Fahrenheit and includes strainers and integral checks
• Sinks are available with faucets

Traditional gooseneck faucets are a primary ligature point for many inpatient suicide attempts. BestCare faucets are designed with sloping surfaces to eliminate ligature points while also remaining vandal-resistant. Conical faucet heads, pneumatic operated push button, Piezo touch-button, and sensor activation options are available.
Use anywhere in your facility!

Ligature-Resistant Sensor Activated Faucet for hands-free operation. Universally designed for bathrooms and facilities where ligature points are a concern. The faucet is designed for new construction or to retrofit onto existing 4” centerset sink decks. Chrome plated, with lead-free brass.

The infrared sensor is electronically operated and can either be hardwired or battery operated.

Sensor Activated Faucet
The BestCare sensor activated single temperature faucet includes a sensor that will allow water to flow until hands are removed from sensor range.

- Priced to use!
- Ligature-resistant
- Helps with infection prevention
- Chrome plated solid brass
- Low flow
- Faucet is factory set to 20 second max run time
- 4” centerset
- Lead-free

BestCare ligature-resistant faucets are specially designed with sloping surfaces and minimally protruding buttons to minimize ligature points. The faucets come in either a hot and cold configuration or a single temperature configuration.

The faucet features a non-splash, non-aerated, multi-stream spray nozzle. Designed with both new construction and retrofit in mind, the faucets come in 4" and 8" rough-in and widespread rough-ins to fit most any application. All of the BestCare faucets come with valves that allow the facility to time the amount of water that will be delivered to the user when activated.

There are different varieties of valves, pneumatic and electronic. The pneumatic valve is pushbutton controlled, using air to activate the valve (ideal for retrofit because electricity is not required). The electronic valve is available in touch-button and hands-free sensor operation for widespread applications. Optional battery operated. All of the faucets meet lead-free requirements.

| WHST70-12 | Thermostatic tempering valve is factory set at 105° F / 41° C and is field-adjustable. |
Traditional floor mounted toilets have exposed S-bends and detachable liftable seats acting as dangerous ligature points. BestCare toilets are to be installed seamlessly on the floor and against the wall and come standard with a gray ligature-resistant toilet seat to further minimize ligature points.
STOP DANGEROUS BREAKAGE WITH STAINLESS STEEL
Porcelain toilets can be broken, creating ligature points, sharp edges, and potentially lethal weapons. All BestCare toilets are made out of stainless steel. BestCare toilets provide the safety of stainless steel and are powder coated white to mitigate the institutional look of stainless steel that is commonly associated with correctional facilities (non-powder coated stainless steel toilets are also available when requested).

WHY STAINLESS STEEL?
• Wider behind the bowl, reducing ligature points
• Constructed of unbreakable stainless steel with a durable white powder coating
• Toilets can be modified to replace existing wall hung toilet with carrier remaining in place to simplify renovation
• Patent Pending Gray toilet seat comes standard

WH2142-W-0021, Wall Supply Toilet in Enviro-Glaze® White Powder Coating w/ Ligature-Resistant Toilet Seat in Gray
• On-floor, top supply (-T) or wall supply (-W) versions available
• Flush valve and cover sold separately or as a package
• Enclosed bottom panel provided to limit vandalism yet provide access for installation and servicing
• Floor or wall waste available
• Can be bariatric when paired with a Jay R. Smith Mfg. Co.® fixture support; weight capacity is 5,000 lbs

WH2142-W-0021, Wall Supply Toilet in Enviro-Glaze® White Powder Coating w/ optional Ligature-Resistant Toilet Seat in Black

WH2142-T-0021, Top Supply Toilet in Enviro-Glaze® White Powder Coating w/ optional Ligature-Resistant Toilet Seat in White

We can modify our toilet to match your plumbing!
Modified toilets for behavioral healthcare facilities are a great solution for retrofit projects. These can replace wall or floor mounted toilets with a ligature-resistant toilet without major construction.

- Provides the option of leaving existing wall carrier in place
- No need to open wall
- Reduces the need for asbestos remediation
- Plumbing rough-in dimensions are unchanged
- Enviro-Glaze® powder coating resembles porcelain china
- Stainless steel construction for durability
- Can be bariatric when paired with a Jay R. Smith Mfg. Co® fixture support; weight capacity is 5,000 lbs
- Comes standard with gray toilet seat

5,000 lb. WEIGHT LIMIT
• High-efficiency urinal is designed to minimize ligature points
• Constructed of unbreakable stainless steel with a durable white powder coating
• Enclosed bottom panel provided to limit vandalism yet provide access for installation and servicing

Traditional toilet seats are mounted to the toilet bowl via hinges, which are dangerous ligature points. BestCare toilet seats are mounted directly to the toilet bowl without brackets. BestCare toilet seats can be removed for simple cleaning, and feature sloped edges, no lid and a curved seat.
TOILET & URINAL ACCESSORIES

TOILET SEATS

- Made to reduce the stigma of seat-less toilets
- Contoured for comfort, with a warm residential look and feel

- Ligature-Resistant Toilet Seat is made of impact resistant ABS plastic
- Seat is bolted to toilet to reduce ligature points
- Seats will only fit BestCare toilets
- Patent pending toilet seat design

WH2142-T-0021, Top Supply Toilet in Enviro-Glaze White Powder Coating w/ WH2802SLPT-1.6 Flush Valve Cover in Enviro-Glaze® White Powder Coating
Conventional showers feature an array of hazardous ligature points. BestCare shower solutions include conical showerheads, non-rising stems, ADA compliant tri-lever handles, seamless panel covers, and ligature-resistant shower drains.
SHOWER SOLUTIONS

SHOWERHEADS, VALVES, DIVERSERS & RETROFIT KITS

SINGLE SHOWERHEAD
- Beveled edges for ligature-resistance
- Conical shaped showerhead
- Powder coated white with Enviro-Glaze®

WHCHS, Showerhead in Enviro-Glaze® White Powder Coating

DIVERTER
- Ligature-resistant shower diverter valve to redirect flow of water from high and low positioned showerheads, or between the showerhead and tub spout
- The handle and trim matches the WHSV16 shower valve
- Patented design

WHDIV, Shower Diverter

SHOWER VALVE, HOT TO COLD
- Non-rising stem prevents the handle from protruding further from the wall when opened
- Patented design

WHSV16, Non-rising Stem

RETRO-FIT CATRIDGE TRIM KIT
- Retrofit solution
- Tri-lever Handle
- Temperature/pressure balance mixing valve for individual showers
- Patented design

DRAINS

Traditional drains possess unexpected ligature points, as patients have been known to attach ligatures to drain grates in order to suffocate themselves. BestCare patent pending drains come in a variety of styles that minimize ligature points while also helping to prevent intentional clogging associated with behavioral healthcare facilities.
Step into the shower with drains that are barrier free, ADA-compliant, fabricated with a standard satin finish and designed to help prevent clogging and ligature attachment.

BestCare ligature-resistant circular floor drains are designed with an internal gusset system that minimizes ligature points.

*Whitehall® provides retrofit grates for applications with existing drains. For new construction, we can provide Jay R. Smith Mfg. Co.® drains with entirely new assembly.

With all the ligature-resistant benefits of circular drains, square drains offer aesthetically pleasing corners to maintain universal design in floors with square or straight-line patterns.

*Whitehall provides retrofit grates for applications with existing drains. For new construction, we can provide Jay R. Smith Mfg. Co.® drains with entirely new assembly.

BestCare Stainless Steel Linear Shower Drains are an aesthetically pleasing alternative to traditional shower drains, featuring fewer ligature points.

Linear drains are ideal for applications where wheelchair accessibility is a must. Simplicity in design and durability in construction ensure a clog-resistant alternative to traditional shower drains, helping to maintain a clean and healthy behavioral healthcare environment.

BestCare linear drains are designed with a drain cover designed without perforations to prevent ligature points. A hidden shield under the drain cover also prevents ligature points. Can be used as a threshold for showers, thus making them ADA compliant.

Facility managers often report drain clogging caused by behavioral healthcare patients. The linear drain cover prevents patients from clogging drains with waste products.

BOTTLE & CUP FILLERS

PUSH BUTTON

Model WHBF3 is a Ligature-Resistant Semi-Recessed Push Button Activated Bottle Filler, ADA compliant, fabricated from stainless steel, and may be mounted in a 4” or larger wall space for simple installation virtually anywhere. The WHBF3 is fabricated from type 304 stainless steel and polished to a satin finish or Enviro-Glaze® powder coating, housing a slim look that blends perfectly into any environment.

WHBF3, Push Button Bottle Filler in Enviro-Glaze White Powder Coating

SENSOR

Model WHBF4 is a Ligature-Resistant Semi-Recessed Sensor Activated Bottle Filler, ADA compliant, constructed of stainless steel, and perfect for years of trouble-free service. It meets ADA forward and side reach requirements, and features a key latch and hinged door for simple maintenance access. The WHBF4 can be mounted in a 4” or larger wall space for convenient installation and blends into virtually any environment.

FEATURES & BENEFITS

- 18 gage stainless steel
- Quick fill rate
- Laminar flow eliminates splash
- Key latch opens adjacent hinge door for simple filter replacement and maintenance
- Optional non-proprietary filter readily available
- Easy installation and maintenance

Suicide is the 8th leading cause of death in the United States.⁷
To meet ligature-resistant needs, BestCare towel and clothing hooks feature auto-release technology, designed to release at 11 pounds of resistance to reduce the opportunity for ligature attachment.

Towel and clothing hooks are integrated into stainless steel panels furnished with ¼" tamper-resistant screws for use with installing seamlessly into provided wall anchors. Patented hook base design. Patented hook pin design.

Insert Allen wrench, and turn until desired weight resistance is reached; can be adjusted to hold up to 20 lbs. Tapered hook prevents ligature attachment. Patented hook base design. Patented adjustable hook design.

Factory set to 11 pounds of resistance

Fully adjustable for low to high risk security applications. Can withstand up to 20 pounds of resistance.
ACCESSORIES

TOWEL & CLOTHING HOOKS

- Surface mounted
- Minimizes potential ligature points
- Four auto-release hooks for clothing and towels
- Adjustable hooks comes factory set to 11 pounds of resistance and is fully adjustable
- Patented hook base design
- Patented adjustable hook design

WH1830A-SLPT, Surface Mounted Hook in Enviro-Glaze® White Powder Coating

- Surface mounted
- Minimizes potential ligature points
- Four auto-release hooks for clothing and towels
- Adjustable hooks comes factory set to 11 pounds of resistance and is fully adjustable
- Patented adjustable hook design

WH1828A-SLPT, Surface Mounted Hooks in Enviro-Glaze White Powder Coating

- Surface mounted
- Four auto-release hooks for clothing and towels
- Designed with sloped bookends and base to reduce ligature points
- Shelf is tall and deep enough to hold typical bathroom items
- Adjustable hooks comes factory set to 11 pounds of resistance and is fully adjustable

Does your color scheme really matter?

- The color most beneficial in making people feel calm and relaxed is **BLUE**.
- **GREEN** is one of various colors that can be beneficial to reduce anxiety and bring about a calmer state of mind.
- **PINK** is theoretically found in the red family, but retains primary implications of its own. If used appropriately in facilities, it can help reduce patient aggression.
BestCare ligature-resistant access doors provide access to behind-the-wall components such as water valves and electrical lines. Access doors are attached with a continuous hinge and feature sloped edges to minimize ligature points. Also available in stainless steel.

LATEST JOINT COMMISSION STATISTICS

The environment of care is made up of three basic elements:

1. **The building or space**, including how it is arranged and special features that protect individuals served, visitors, and staff.

2. **Equipment** used to support care, treatment, or services or to safely operate the building or space.

3. **People**, including those who work within the organization, individuals served, and anyone else who enters the environment, all of whom have a role in minimizing risks.

Risks are inherent in the environment because of the types of care provided and the equipment and materials that are necessary to provide that care. The best way to manage these risks is through a systematic approach that involves the proactive evaluation of the harm that could occur. By identifying one or more individuals to coordinate and manage risk assessment and reduction activities - and to intervene when conditions immediately threaten life and health - organizations can be more confident that they have minimized the potential for harm. Risks in the environment includes safety and security for people, the handling of hazardous materials, the potential for fire, and utility systems.  

Suicide is the second leading cause of death among 25-34 year-olds and the third leading cause of death among 15-24 year-olds. Almost 16% of students in grades 9-12 report having seriously considered suicide.  

1-800-782-7706  www.whitehallmfg.com
Suicide is the second most common cause of death in the US military.8

Every 13 minutes a person dies by suicide in the US.8

Suicidal thoughts and behavior among adults aged 18 or older:

9.3 million reported having serious thoughts about suicide
2.7 million made suicide plans
1.3 million attempted suicide
1.1 million made plans and attempted suicide
0.2 million made no plans and attempted suicide8

CITATIONS
Whitehall’s patented Infection Prevention Sink is made of cast solid surface material that has been infused with SteriTouch®, which reduces the growth of harmful bacteria and mold. The offset drain prevents water from directly hitting the drain. Typical drains are usually located right under the spout that subsequently cause the residual bacteria to splash back out into the air and out of sink.

**DEEP SCRUB SOLUTION**

Whitehall’s Infection Prevention Sink has features that assist healthcare workers, patients, and food handlers with proper hand washing to reduce the spread of bacteria.

- Can use any type of faucet
- Internal slope defuses water flow, minimizing splash
- Thin outside rim is angled downward to discourage users from placing objects on it
- Patented front contour fits the body contour better for easier hand washing

Handwashing is one of the most powerful tools in the fight against the spread of infection.

It is estimated that 100,000 people die from hospital-acquired infections each year. According to the United Nations Health Agency, hundreds of millions of infection could be prevented if health-care professionals, patients and their families, wash their hands with alcohol-based rub or soap and water before and after touching patients and their surroundings. When done regularly by food handlers, handwashing can also prevent the spread of food borne illness. Whitehall’s Infection Prevention Sink has features that assist healthcare workers, patients, and food handlers with proper handwashing and reduce the spread of bacteria.

**OTHER PRODUCT LINES**

**INFECTION PREVENTION SINKS**
Whitehall's Solid Surface Sinks eliminate the water that runs into the backsplash, which is a perfect site for the growth of bacteria and mold.

We have many options for sink customization for everything from the color, configuration, depth, and size.

SURGICAL SCRUB SINKS

Whitehall’s Stainless Steel Scrub Sinks are designed and engineered to be durable, easy to maintain and convenient to use. Scrub sinks are available in single, double or triple station configurations. Surgical Sinks are ADA compliant, and can be modified to fit the needs of the facility and end user.

Some available options:
• Eyewash
• Storage shelf
• Timing device
• Soap flushing system
